

The Peterborough indoor Bowls Centre currently has a self-propelled wheelchair for use by disabled bowlers if they require it. Unfortunately, this usually means that the person using it has to rely on a friend or another member to push them up and down the rink. This we feel could put some people off trying bowls out as it possibly makes them feel uncomfortable.

There is an electric version Purposely made to not damage the mat, that is self-driven and propelled which with delivery costs £2040. I am leading the effort to fundraise with the aim of purchasing one and opening the game of bowls to more people.

I have started a just giving page on Facebook and would be interested in any help and or suggestions that members could offer to achieve our aim.
